architectural
solutions**

**Segezha
PlyForm**
Formwork plywood

New possibilities in construction

Segezha PlyForm formwork plywood is a new standard in erecting cast-in-situ constructions. Thanks to its grey-coloured modified phenolic film, Segezha PlyForm is setting a new trend in state-of-the-art formwork systems.

Make use of competitive advantages!

The majority of offerings today for formwork systems are based on using plywood with a dark brown laminate. The current market is virtually flooded with low-quality solutions which tarnish the reputation of formwork products from reliable manufacturers.

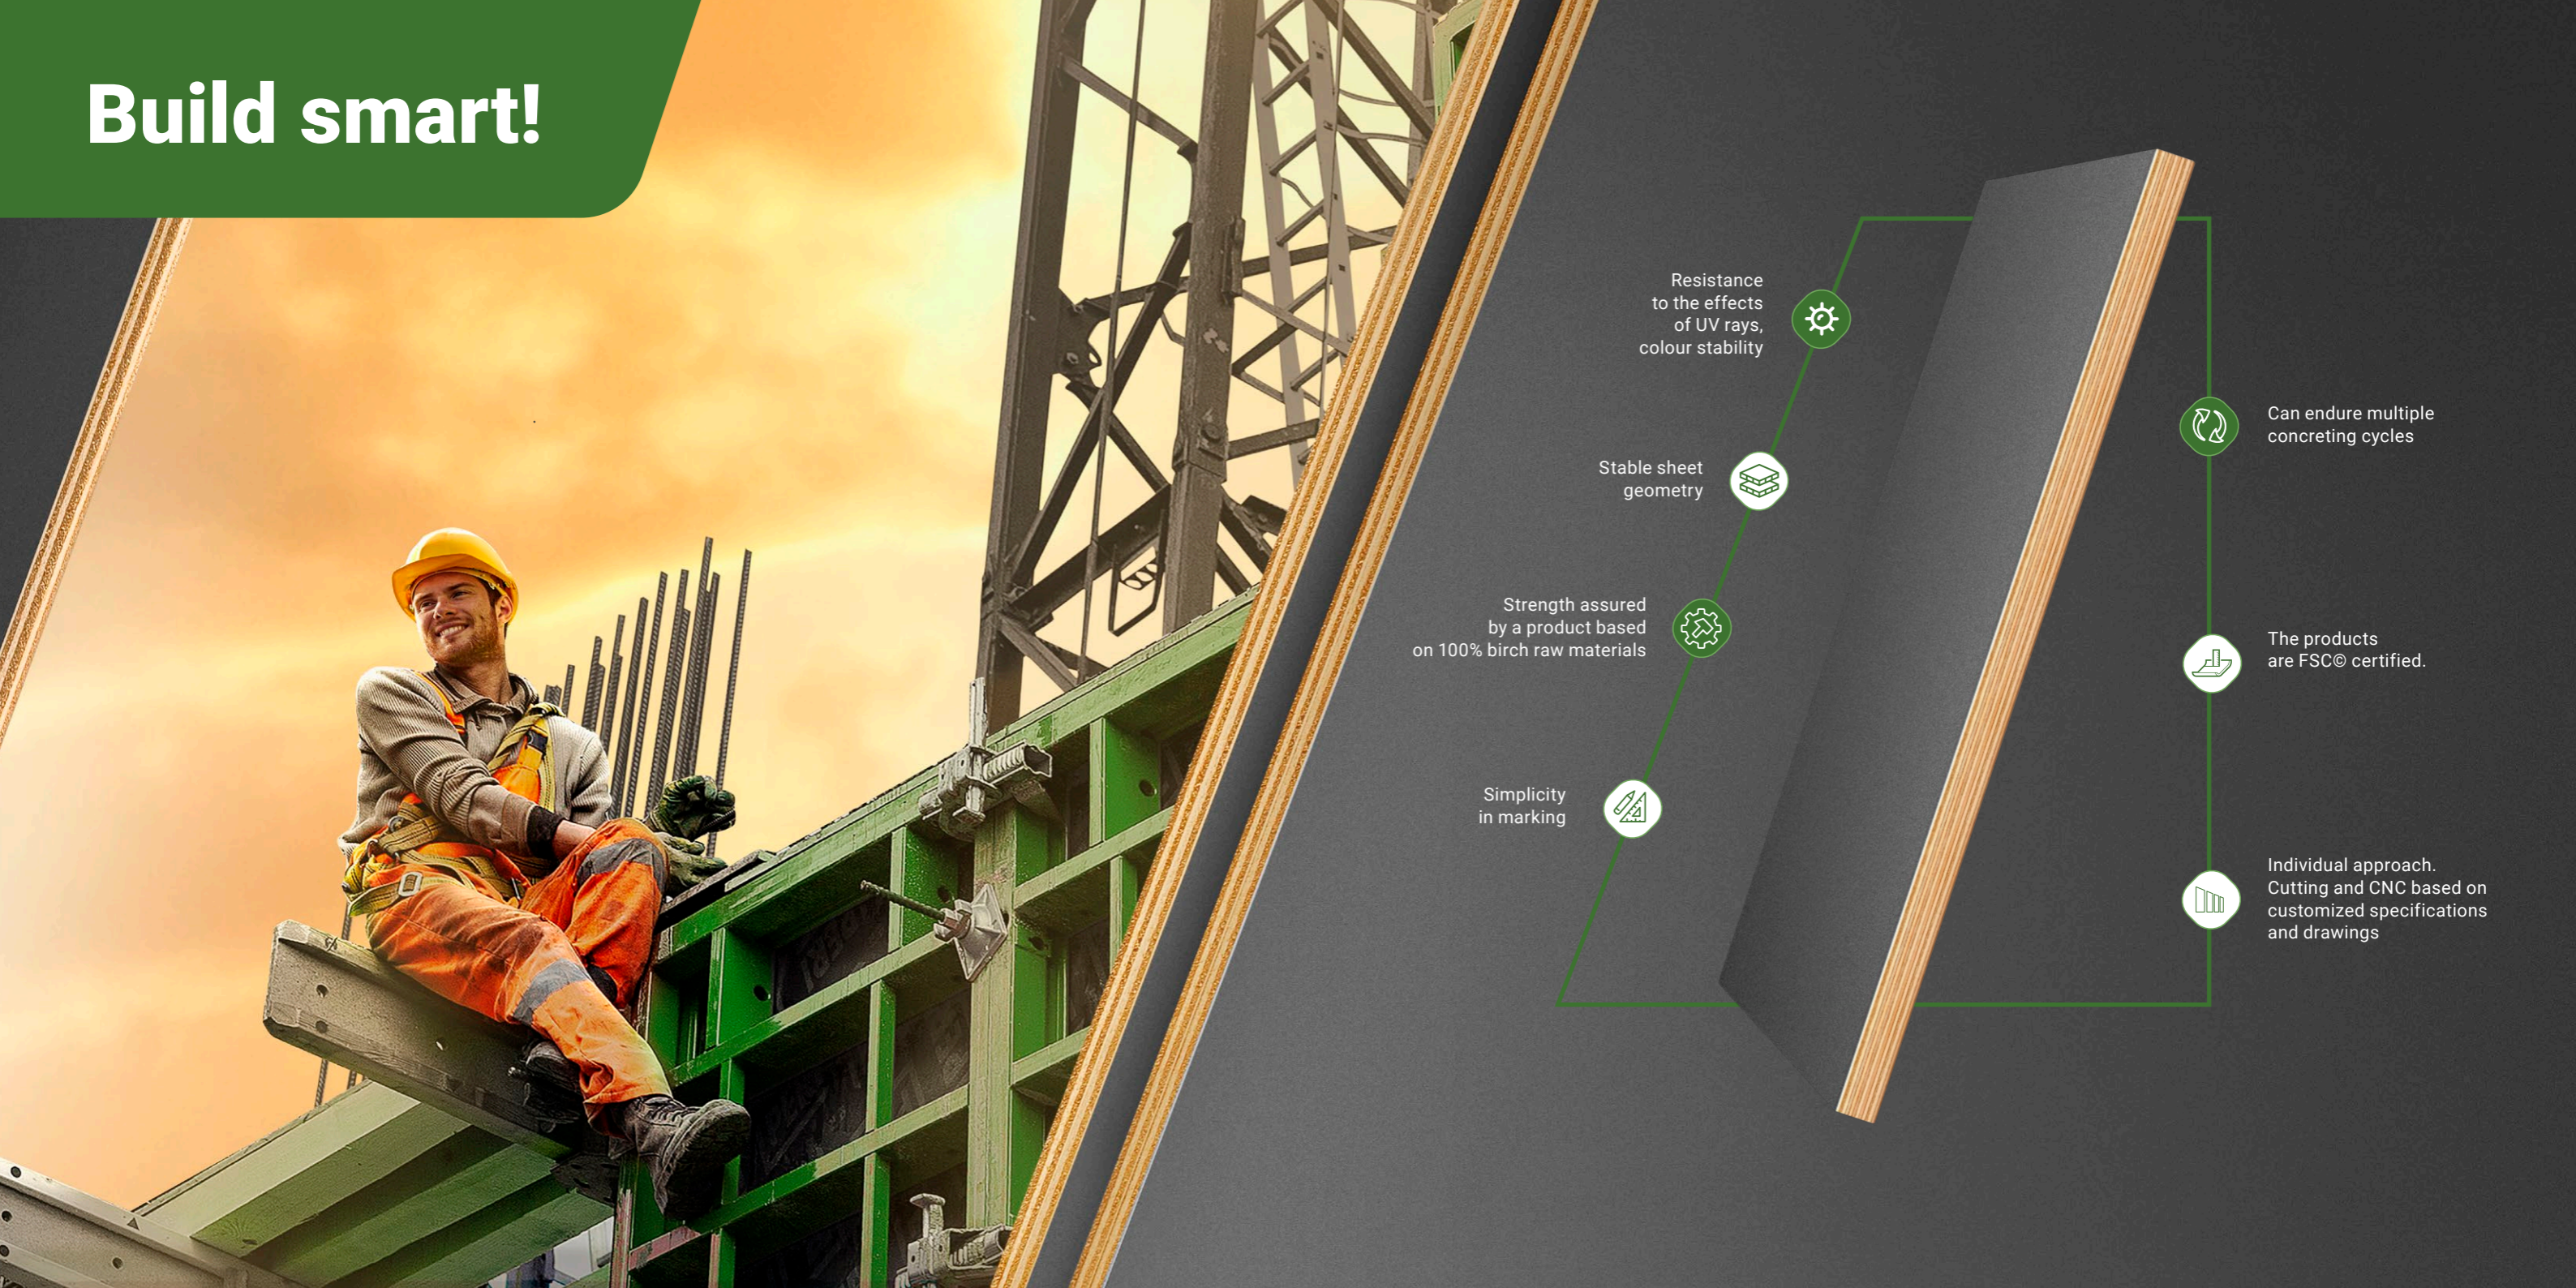

Segezha PlyForm is produced in a saturated grey colour and is easily recognizable against a background of low-quality solutions.

The product features enhanced resistance to moisture and alkalis.

Build smart!

Resistance to the effects of UV rays, colour stability

Stable sheet geometry

Strength assured by a product based on 100% birch raw materials

Simplicity in marking

Can endure multiple concreting cycles

The products are FSC® certified.

Individual approach. Cutting and CNC based on customized specifications and drawings

Specifications

<p>Dimensions</p>	<p>1220x2440; 1250x2500 mm – 4 x 8 2440x1220, 2500x1250 mm – 8 x 4 1500x3000; 1525x3050 mm – 5 x 10 1220/1250x3000/3050 mm – 4 x 10 1500/1525x2400/2440/2500 mm – 5 x 8</p>
<p>Thickness</p>	<p>6- 40 mm</p>
